

# Crdll®

*Touch is care, and care is an innate  
need of all of us.*

# Deep. connection

Crdl was born out of the wish to enable moments of meaningful connection between people with physical or cognitive impairments and their loved ones. It provides a sensorial experience that explores the beauty of touch and sound.

Crdl is used as a therapeutic intervention by caregivers to engage with people who are living with conditions such as dementia, autism, mental disabilities or visual impairments.

*A care instrument designed to  
create impactful connections between people.*

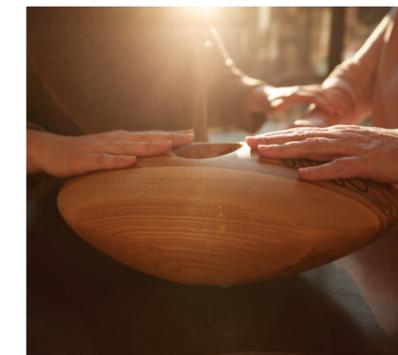

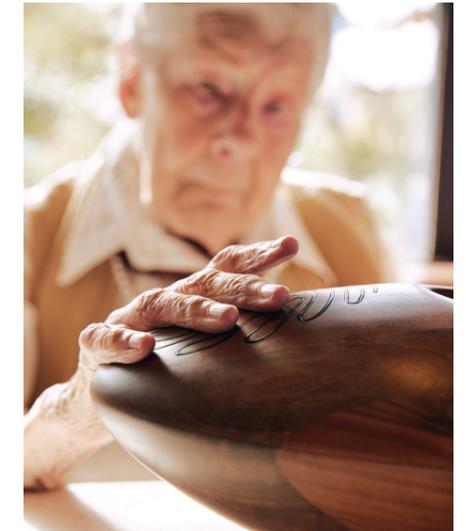

# Meet Crdl

## *Breaking Isolation*

A Crdl moment aims to break social isolation and establish connection. It creates a form of equality, whereby each participant has the same opportunity to engage and enjoy the other's presence and energy, regardless of cognitive abilities.

Crdl sets up conditions for a shared encounter that can be open and vulnerable. A heartfelt connection, from one human to another.

## *The Crdl Moment*

A Crdl moment starts when two users each place a hand on the conductive pads forming a circuit at the moment they touch each other.

The Crdl recognizes the manner and intensity of touch and translates this into different sounds. However, it is the user that creates the possibilities. How a person chooses to approach and touch another, can convey different meanings and intentions. Funny, deep, relaxed or intimate.

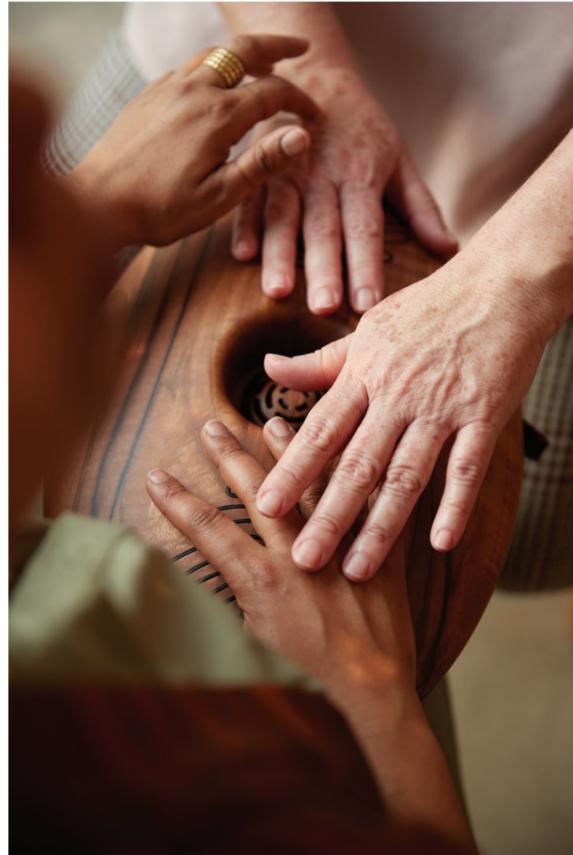

Crdl's sound-stories are little immersive worlds, carefully crafted to evoke meaningful memories and emotions. They create an intuitive experience, allowing users to be deeply involved in the moment.

Crdl can be used one-on-one or in a large group session.

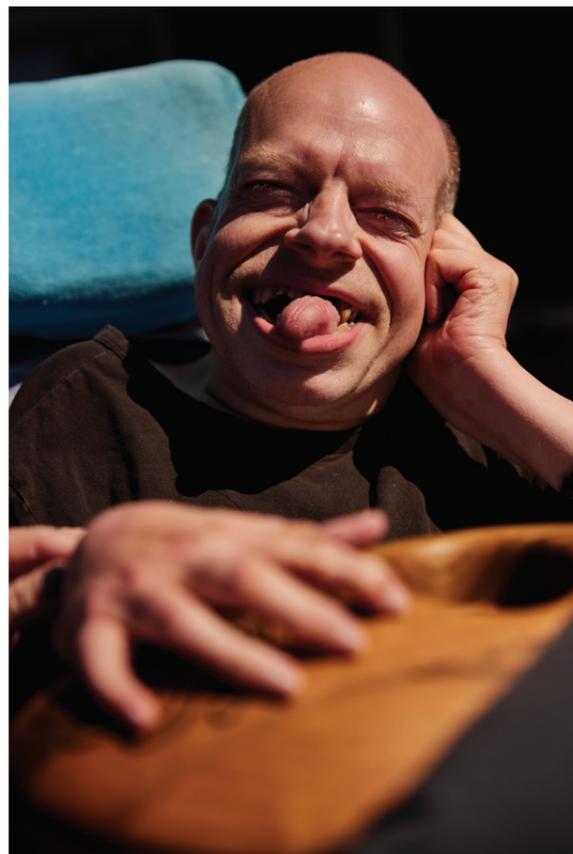

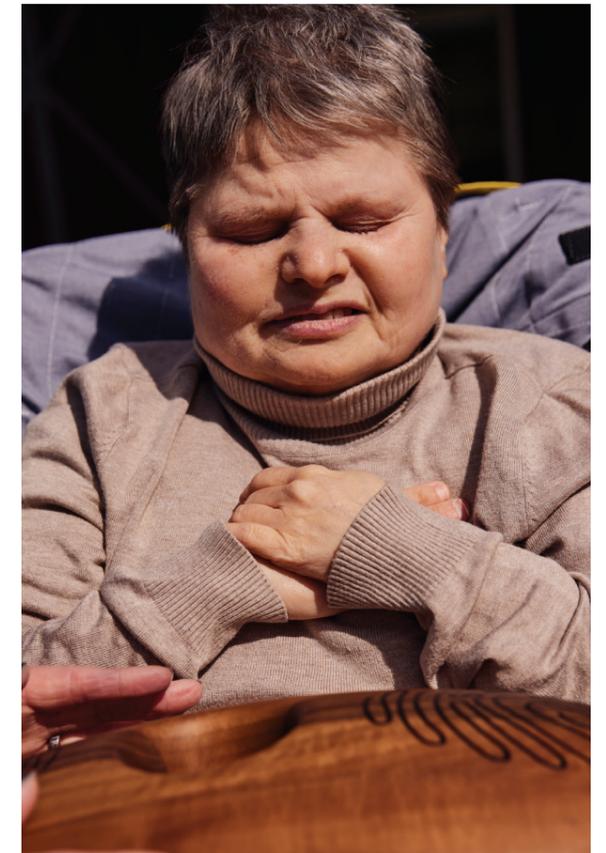

*We believe in the transformational power of human touch.*

*We believe in the basic human need to connect.*

# The Impact

The power of a Crdl interaction recreates one that has been lost in contemporary life.

The Crdl experience enables moments of presence, when we can see beyond any disability and connect with another person effortlessly.

The experience enhances user's quality of life because it creates an opportunity to embrace the essential need to belong, to be alive, to grow.
